External momentum visibility

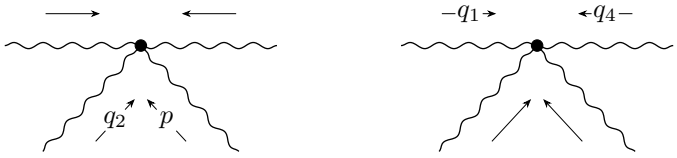

Slot 2 hidden: no momentum annotation. Its propagator and particle label remain.

Same momentum slots without hiding: slot 2 has a continuous unlabeled arrow.

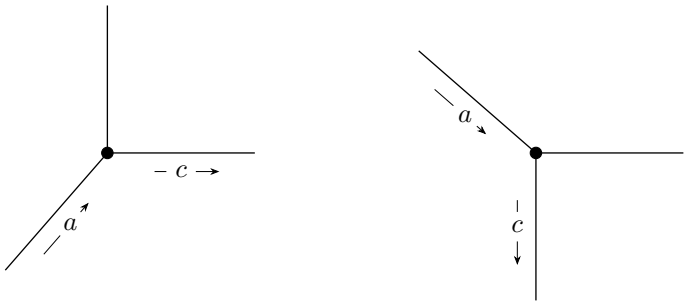

Empty entries at the beginning and end preserve slot positions.

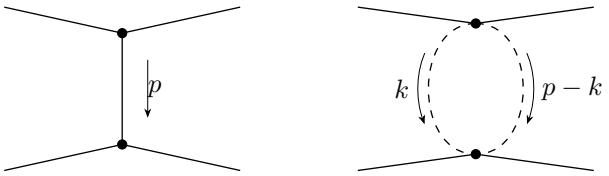

Logical slots and internal momenta

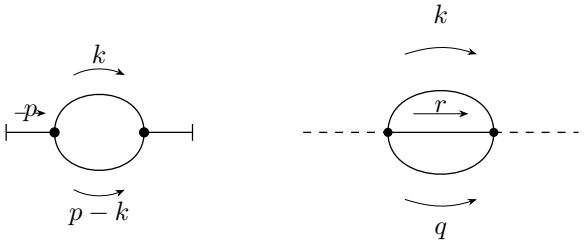

Rotated three-point diagrams: slot 2 hidden in both orientations.

Tree and loop channels: external slots hidden; internal momenta retained.

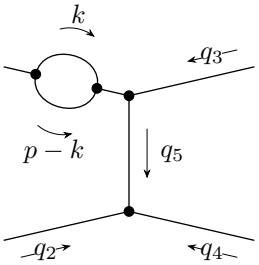

Standalone bubble: slot 2 hidden. Sunset: both external slots hidden.

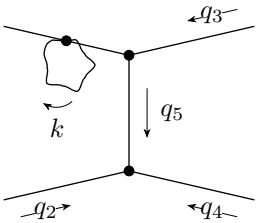

Inserted external leg

Bubble insertion: hiding slot 1 removes both split annotations, preserving loop momenta.

Seagull insertion: same logical slot behavior, preserving its loop momentum.

Empty slot 1: both split arrows remain, without label nodes.
