Seagull loop endpoint selection

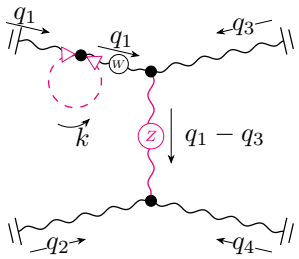

Exact reported example: `proca start` (one triangle, right branch).

Same settings with `proca end` (one triangle, left branch).

Same settings with `proca` (both triangles).

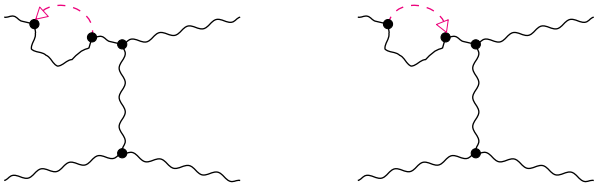

Bubble endpoint selection

Standalone bubble, upper propagator: start only (left), end only (right).

Inserted bubble, upper propagator: start only (left), end only (right).

Small and large markers retain their requested size on different loop radii.
