Crossed-box circles: exact user example

Same diagram, options and display scale. Only the package code changes.

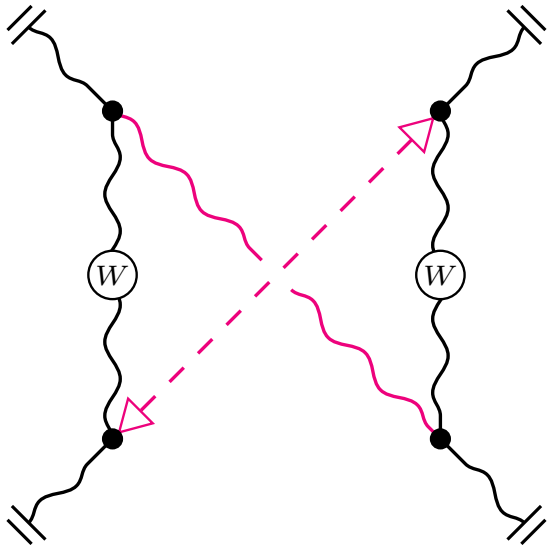

Before

Three circles: two W rings plus an unwanted empty Proca ring.

Requested `circ scale=0.6` is ignored.
W-ring radius: 5.978 PDF pt.

After

Two explicitly requested W rings. The bare pink Proca line has no circle.

`circ scale=0.6` scales both ring and W text.
W-ring radius: 3.587 PDF pt.

Verified behavior

Both internal crossed-box layouts preserve line-local circle sizes and colors. Explicit Proca circles still work, including one circle on a split line. The crossing gap and endpoint markers are unchanged.

Source: the user's unchanged `CrossBoxCorr` options, saved in the D02 reproducer. The before output uses package checkpoint `e64cc2f`; the after output uses the corrected package.
