Three-Point Feature Gallery

All four orientations, with the special slot-1 leg styled as `epspol`. Slot labels, indices, momenta, and leg styles remain attached to slots 1, 2, and 3 after rotation.

down

Scaling and external-leg length. The first row scales the full drawing; the second row changes only the special slot-1 external leg.

Double-endcap tuning on three-point vertices. The inner cap is intentionally longer than the terminal cap, and the gap between the bars stays blank.

Raw `endcapp` propagators also reserve blank space between the two bars, independent of the topology-managed drawing path.
